EDUCATION

University of Toronto   **Scarborough, ON, Canada**
Bachelor's of Science, Computer Science   November 2023

WORK EXPERIENCE

Paeez Fine Foods   **Newmarket, ON, Canada**
Web Developer   May 2022 - Present
- Built online grocery ordering functionality for the company website by combining custom javascript and php scripts with pre-built Wordpress plugins, ensuring connectivity with the company's pre-existing inventory system, in order to boost sales through online channels and improve accuracy of inventory tracking
- Analyzed the company's inventory system and identified the key components that needed to be integrated
- Collaborated with the upper management team to outline the functionality and design requirements of the online ordering system
- Increased grocery sales by 20% within the first month. Additionally reduced inventory tracking errors by 25%, providing the company with better insights into product demand and stock levels

Unleash Medicine   **Toronto, ON, Canada**
Web Developer   September 2019 - May 2023
- Designed and developed a comprehensive website that provides users any information they would need about the non-profit organization's goals and services, utilizing Wix and their built-in full-stack development platform Velo to ensure an easy to use back-end and dashboard that can be easily maintained in the future by anyone despite level of development experience
- Built an online ordering system that enabled an increase in organization reach from only the non-profit's starting neighbourhood to the majority of the Greater Toronto Area
- Regularly monitored and analyzed website analytics, using analytics tools such as Wix's built-in site analytics and Google Analytics, to identify the usage rates of the organization's different informative resources to determine what information garnered the most user interest

Ministry of Health and Long Term Care   **Toronto, ON, Canada**
Quality Assurance Analyst Co-op   January 2018 - August 2018
- Conducted thorough testing of software applications, using Selenium and tSQLt, to identify defects in the business analytic forms, ensuring high-quality and accurate information
- Developed a more efficient and comprehensive quality assurance program utilizing automated testing tools that ensured all deliverables were up to quality standards while requiring a shorter testing time frame
- Brought time to perform total suite of tests down from 4 hours to 1 hour, a total reduction of 75%
- Wrote detailed documentation for the quality assurance program to ensure ease of use and simple modification in the future
